DESCRIPTORS: \*Sea water, Black Sea, Water, \*Oxi-  
dation-reduction reactions, Potential theory.

A study of the distribution of the oxidation-reduction  
(redox) potential in the depths of the waters of the open  
portion of the Black Sea, using the electrometric  
method and, in part, the colorimetric method (with  
methylene blue), showed three zones with characteris-  
tic redox potential values. The upper zone, roughly the  
layer between 0 and 100 meters, has positive and  
rather stable values of the redox potential, from
